

WDA-3405, WDA-3430, WDA-3460 PENTELIC ROLL-IN SHOWER FLOORS

Terrazzo's natural non-slip surface provides better footing and increased safety. Wheelchair shower floors are flanged on three sides for a watertight joint between the wall and shower floor. These shower floors must be set on a level grout or mortar bed.

The intent is to allow a wheelchair patient to remain seated in the wheelchair and roll into the shower. This model must be recessed into the building floor to allow unobstructed wheelchair entry.

FEATURES

- The above roll-in type models conform to 2010 ADA standards for accessible design and A.117.1–2009
- WDA-3460 and WDA-3430 are ADA Compliant
